Your pool, as unique as you are

Do not limit yourself, design your swimming pool entirely according to your own taste and wishes. Flexline develops high-quality custom-made swimming pools, manufactured from the most stable and robust polypropylene panels. As a manufacturer, it is our mission to produce the best pools following strict and controlled procedures. For installation, we work together with professional pool builders who are fully dedicated to installing Flexline pools.

Flexline was founded to meet the expectations of demanding pool enthusiasts who do not want to make any compromises in terms of quality and who wish complete design freedom when realizing their dream project. Thanks to the expertise of the members within the European industrial group TSPH (The Swimming Pool Hub), Flexline was able to start strong from the outset and deliver personalized one-piece pools to customers across Europe.

Our factory is located in Aarschot, Belgium, and uses the logistical platform of TSPH within Europe.

Design freedom

Durable

Leakproof

Low maintenance

Chemical
resistance

Quick installation

From idea to pool in 10 steps

from vision to pool

1

Design and planning

Your pool builder creates a detailed plan with all specifications: dimensions, shape, depth and any extras such as stairs, benches, or an integrated cover.

2

Extrusion of panels

Polypropylene panels are extruded. You can choose between a smooth surface or a leather grain structure that combines elegance with anti-slip properties.

3

Welding and assembly

The panels are welded at high temperatures, creating elegant and durable connections that guarantee absolute watertightness.

4

Reinforcement

To increase strength, profiles are welded to the outside of the vertical walls.

5

Stairs and underwater bench

Your chosen stairs and any integrated bench are mounted in the pool. These are finished with a ribbed, anti-slip top layer.

6

Quality control

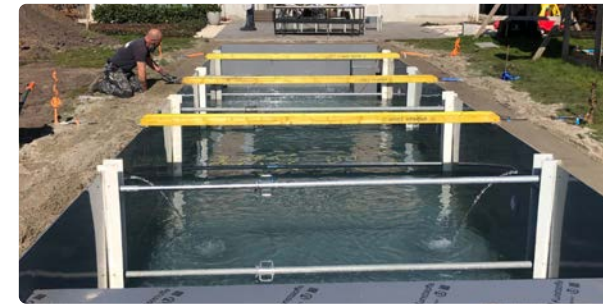

Each pool shell undergoes strict quality control. We check for defects, test the welds' strength and verify dimensions according to your order.

7

Transport

The finished shell is carefully packaged for transport, with special attention to protection against damage.

8

Installation

Your professional pool builder installs the pool perfectly in the right location, aligns it, installs the filtration, water treatment and any coping stones.

9

Final inspection

After installation a final inspection ensures everything works as expected.

10

Maintenance instructions

Your pool builder provides all the necessary information and advice to maintain your pool safely and efficiently. With their support and after-sales service, you can enjoy it worry-free.

The Flexline pool in polypropylene

Your pool is made of high-quality polypropylene copolymer of German origin (PPC).

The panels, available in 10mm or 20mm thicknesses, are resistant to frost, osmosis, and chemicals. They are UV-resistant and comply with strict ISO and DIN standards. Polypropylene does not release harmful substances or microplastics into the water.

The panels used by Flexline are 100% recyclable and remain useful long after the pool's lifespan. A perfect score when it comes to sustainability.

After the design of your pool and approval by our mechanical engineer, we start production.

A fully tailor-made one-piece pool requires precision, quality control, and attention to detail during the entire process. Only in this way do we create durable, robust pools that you can enjoy for years.

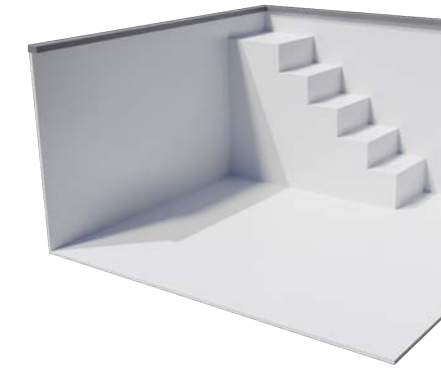

Undeniable advantages of polypropylene:

- ✓ Prefabricated and fast installation
- ✓ Complete design freedom
- ✓ Low maintenance
- ✓ No osmosis
- ✓ Resistant to frost, hail, and high temperatures
- ✓ Resistant to chemicals

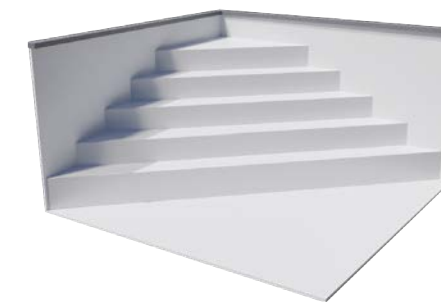

Stair designs

The steps are equipped with an anti-slip structure, so you can safely enter and exit the pool. The leather-look texture gives the surface the appearance and feel of real leather, adding an elegant touch.

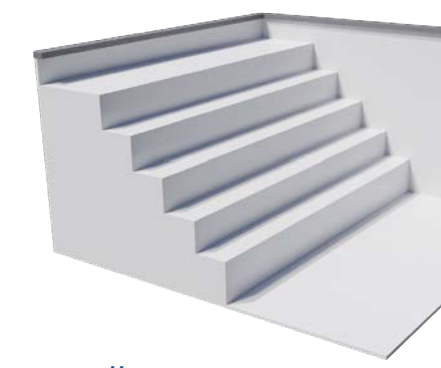

Pure

Minimalist stairs with narrow straight steps. Want more comfort? Choose Pure Plus with a first step of 1m. Double access? Pure Double or Pure Plus Double.

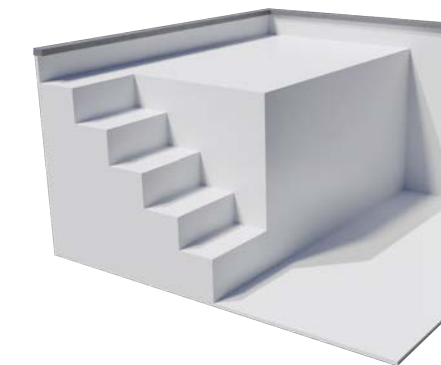

Slash

A sleek corner staircase taking up little space. With Slash Plus, you choose the length of the first step.

Excellence

A wide staircase spanning the entire pool width. Want more? Excellence Plus has a 1m first step (instead of 30 cm).

Lounge

Add an underwater bench and define your own relaxation zone.

Custom

Design your own staircase completely bespoke with "Atelier by Flexline."

Colours – defining the atmosphere

The colour of your pool reflects your personal style and practical choices. Regardless of the model, we deliver it in the colour that suits you best. Choose from four stylish standard colours, or let us create a custom colour for your dream pool.

 **timeless white**
RAL 9010

Clean, fresh, reflective, making the water look inviting.

 **versatile grey**
RAL 7035

Modern and elegant, fits many architectural styles.

 **sophisticated grey**
RAL 7037

Refined and luxurious, making your pool the centrepiece.

 **deep antracite**
RAL 7015

Stylish, adds depth and character, impressive with lighting.

With the Atelier line, you enjoy complete freedom of design. From striking mirror pools to bespoke overflow and edgeless creations, from extraordinary dimensions to unique shapes and exclusive features such as counter-current systems, designer lighting, and tailor-made fittings – every detail is possible.

Your vision is our blueprint. Together with your pool builder, architect, or landscape designer, our experienced design team will shape a fully detailed plan and provide a personalized quotation. Every choice is aligned with both your wishes and the practical requirements of transport and installation.

Turn the page and discover the wide range of finishing touches that will transform your pool into a true masterpiece.

Skimmer Edgeless on 4 sides
Stair Pure + Plage
Deep Anthracite

Skimmer

Skimmer pools feature a discreetly visible skimmer just beneath the edge, efficiently capturing leaves and other floating debris. With coping stones that have an overhanging lip, the water level rests elegantly around 3cm below the pool edge. Choose between a traditional finish with coping stones or a sleek aluminium profile without – and discover the “Skimmer Edgeless” option on the next page for an even more sophisticated, minimalist design.

Skimmer Edgeless

The Skimmer Edgeless design is defined by pure minimalism. With no coping stones around the pool, or only on the sides you choose. A discreetly integrated aluminium profile ensures structural strength while keeping the look refined. The result is a clean, contemporary design that flows effortlessly into your outdoor space, creating a seamless connection between pool and landscape.

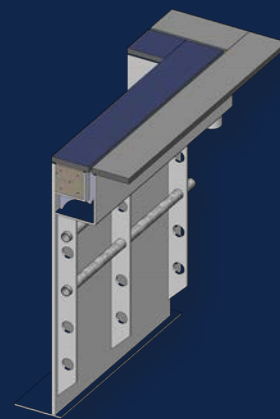

Overflow Type 1 on 4 sides
Stair Pure + Plage
Deep Anthracite

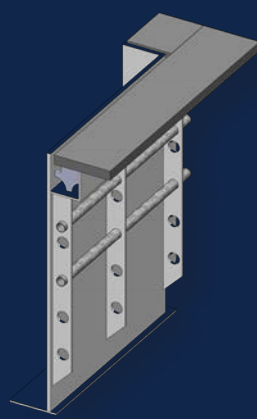

Infinity on 1 side
Stair Pure + Plage
Timeless White

Overflow

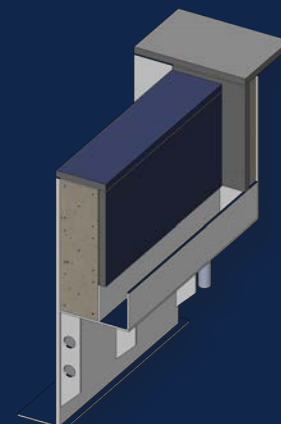

An Overflow pool takes elegance to another level. Instead of a skimmer, water gently flows over the edge into a hidden buffer tank, carrying away leaves and impurities with ease. The effect is breathtaking – a seamless mirror of water reflecting its surroundings. With faster circulation, your pool stays naturally cleaner and clearer, while every drop of water is efficiently recirculated without waste. Choose the Overflow finish on one, two, three, or all four sides of your pool for an architectural statement that is as pure as it is spectacular.

Type 1
Overflow over the coping stone

Type 2
Overflow directly over the pool edge

Infinity

Infinity pools redefine the art of elegance. Like an overflow pool, they create a seamless waterline but with an extraordinary twist. Here, the water cascades down one or more exterior walls like a waterfall, delivering a breathtaking visual experience. By lowering the collection gutter, the water glides smoothly over the edge, enhancing the sensation of infinity. This effect can be applied to one, two, three, or even all four sides, giving you complete creative freedom. The exterior wall can be finished in natural stone, brick, or any decorative material you choose – transforming your pool into more than a place to swim, but a true architectural statement.

Automatic cover

An automatic pool cover brings peace of mind and comfort in one elegant solution. Enhancing safety, reducing energy consumption, and keeping your water crystal clear, all at the touch of a button. With Flexline, you choose exactly how and where the system is integrated, seamlessly tailored to your design and lifestyle.

Under a plage integrated in the pool

Seamlessly hidden within an underwater bench, the automatic cover disappears from view while adding both function and comfort. This elegant plage doubles as a technical housing and a stylish relaxation zone. It can be finished in natural stone and positioned at the depth of your choice (from 20 cm), it blends beauty with practicality.

In a separate niche behind the pool

For a cover that is completely invisible, the system can be discreetly installed in a niche just behind the pool. This solution keeps the entire swimming area free, making it the perfect choice for those who value uninterrupted space, ideal for dedicated swimmers.

For automatic covers, we work exclusively with the Belgian manufacturer Technics & Applications (T&A Group). If you do not find exactly what you are looking for in our range, there are also alternatives such as safety covers or seasonal covers. All our solutions comply with applicable standards and are designed to insulate, protect, and keep your pool clean.

Three types of slats

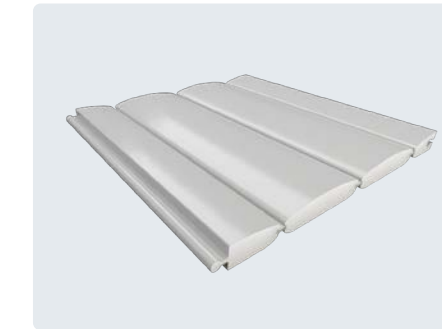

PVC- slats

The Origin slats in opaque PVC are a simple, solid and budget-friendly solution to safely cover your pool. They provide reliable insulation, comply with the NF standard, and show no visible condensation. Available in multiple colours, resistant to temperatures from -10°C to +60°C.

Solar polycarbonate slats

The Quadro slats heat the pool water naturally through solar radiation. They combine excellent insulation with high weather resistance and a refined, elegant appearance.

Covrex® slats

The solid Covrex® slats provide exceptional strength and optimal thermal insulation, without visible condensation. Thanks to their foam-filled structure, they guarantee maximum safety and impressive durability, even in hail. They perform perfectly in temperatures ranging from -20°C to +70°C.

Accessories

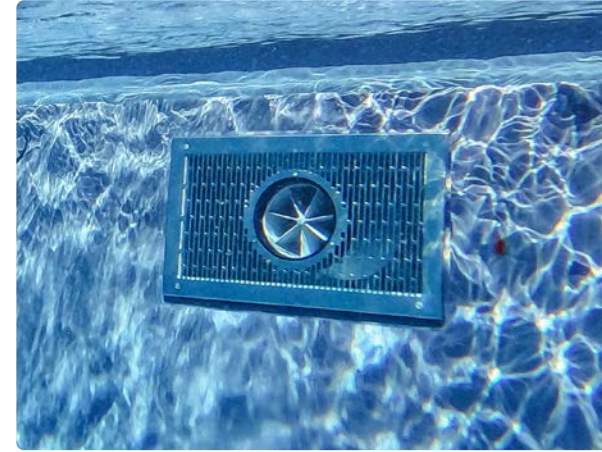

Underwater lighting

With energy-efficient LED spots, you can enjoy a beautifully lit pool even in the evening. They create a pleasant atmosphere and highlight both the water and its surroundings. Available in white or colour, fully tailored to your project.

Finishing of built-in parts

The finishing of components such as lights, inlets, and other technical elements plays an important role in both the look and the functioning of your pool. They protect the underlying components while contributing to the design and overall harmony. Choose a finish in the same colour as the pool or opt for a contrasting shade. For a sleek, modern look, a smooth stainless-steel finish is also available.

Counter-current system

Turn your pool into a private training zone. A counter-current system creates a powerful stream to swim against, perfect for building strength and endurance. It's also a clever way to maximise swimming space, even in smaller pools. Flexline offers both pump and turbine systems, chosen to suit your lifestyle.

Water treatment

Clarity begins with care. Flexline pools are compatible with a wide range of water treatment systems, from automated low-chlorine solutions to natural biological filtration. With expert advice from your pool builder, you'll enjoy crystal-clear water with peace of mind.

Natural or biological pools

At first glance, they may look very similar due to their natural appearance, but the difference lies in how the water is filtered.

A natural swimming pond works with a biologically balanced ecosystem in which plants play a central role in purifying the water. These ponds cannot be covered or heated, as the ecosystem is sensitive to changes in temperature and light.

A biological swimming pool uses advanced biological filtration technology without chemicals. Unlike a natural pond, no plant zone is required, which offers more design freedom and does allow the pool to be heated and covered.

A trusted European network with guarantees that last

At Flexline, we collaborate only with professional pool builders who have proven expertise in installing one-piece pools. Each partner is specifically trained in our techniques and materials, mastering every step of the journey, from permits and piping to electrics and finishing. The result: a pool tailored perfectly to your wishes, style and budget.

As a Belgian brand, Flexline pools are available both locally and across Europe. By choosing a certified pool builder in your region, you'll benefit from fast, reliable service as well as in-depth knowledge of local regulations and technical requirements.

Up to 30 years warranty

In addition to the warranty from your pool builder, as the owner of a Flexline polypropylene pool you also benefit from:

- 10 years warranty on the watertightness of the entire pool.
- 30 years warranty on the watertightness of the panels against cracks or breaks in the shell.

The TSPH family

Flexline is part of the TSPH Group (The Swimming Pool Hub) – a strong, family-owned company that has been shaping the pool industry since 1962. Alongside our sister brands LPW Pools and Aboral Piscines, we operate three state-of-the-art production sites in Belgium and France. This heritage of craftsmanship, reliability and innovation guarantees continuity and excellence for every project.

In the same family spirit, Flexline collaborates with a network of Certified Partners. These dedicated pool builders are trained in Flexline's techniques and bring years of hands-on experience in the installation and maintenance of one-piece pools. They guide you step by step towards a pool that reflects your lifestyle and expectations. With honest advice, technical expertise and a personal touch, they make every project a success. Discover inspiration in their showrooms or visit the Flexline showroom in Aarschot.
